Bachelors of Engineering
Information Technology
2018

SKILLS SUMMARY

- AWS
- Python
- Java
- Scala
- Elasticsearch
- Microservice Architecture
- Docker
- NoSQL
- Github
- Kafka
- Spring Boot
- Temporal

PERSONAL PROJECTS

Seekho - Mobile Application
E-learning through 1-minute videos

Medicodeals - Android Application
B to B E-commerce app for medicine market

Food Ordering App
Application for small joints to manage orders

INTERNSHIPS

ARMENTUM CAMPUS TRAINING
Web Development - Jan 2018 - Jun 2018

BITBYTES SOFTWARE TECHNOLOGIES
Mobile Development - Jun 2017 - Sep 2017

PERSONAL PROFILE

Software Developer with 6.5 years of experience in backend and full-stack development, specializing in building scalable systems, streamlining business processes, and delivering impactful product features. Proven track record in high-growth environments with a focus on performance optimization, cloud-native architectures, and cross-functional collaboration.

WORK EXPERIENCE

Deliveroo | May 2024 - Present

Software Engineer II

- Partnered with Security Engineering to launch SAML-based login, enabling secure and scalable access for corporate vendors on Deliveroo for Work's platform, driving increased business opportunities with 20+ corporates inline.
- Diagnosed and resolved performance bottlenecks in the core authentication service, reducing API latency from ~600 ms to ~90 ms and improving system responsiveness.

Yubi | February 2023 - May 2024

Senior Software Engineer

- Built a credit application system using Spring Boot, reducing loan processing time from 7 business days to under 3 hours.
- Optimized key microservices to improve CAM (Credit Assessment Memo) generation by 40%.
- Integrated Temporal to enhance system scalability and reliability through efficient workflow orchestration.

Delhivery | September 2020 - February 2023

Senior Software Developer

- Developed a vendor fuel payout microservice in Flask, contributing to a 5% increase in vendor profitability.
- Optimized high-traffic AWS Lambda functions, reducing iterator age by 35% for enhanced performance.
- Built a self-onboarding and KYC platform, decreasing manual onboarding tasks by 80%, streamlining vendor operations.

Zensar | July 2018 - March 2020

Software Engineer

- Engineered and tested Python-based features for insurance tech solutions, improving product quality and maintainability by achieving 90% SLAs.
- Spearheaded internal automation tools by researching about emerging technologies to reduce manual effort by 30%.
- Developed an internal newsletter app for increasing the engagement and project knowledge across verticals.
